

## *Serious proposal*

**THIS CONFIDENT, CONSUMMATE AND ELEGANT** combination of colours is represented by the almost obligatory presence of complementary shades of grey with the increasingly popular restrained purple which never loses its beauty in any form and also leads the way in other more playful and bold colour combinations.

### **Colors:**

Light amethyst, magenta, fuchsia, warm shades of grey, raspberry pink, body pink, chrysolite and opal.

## Cool touch

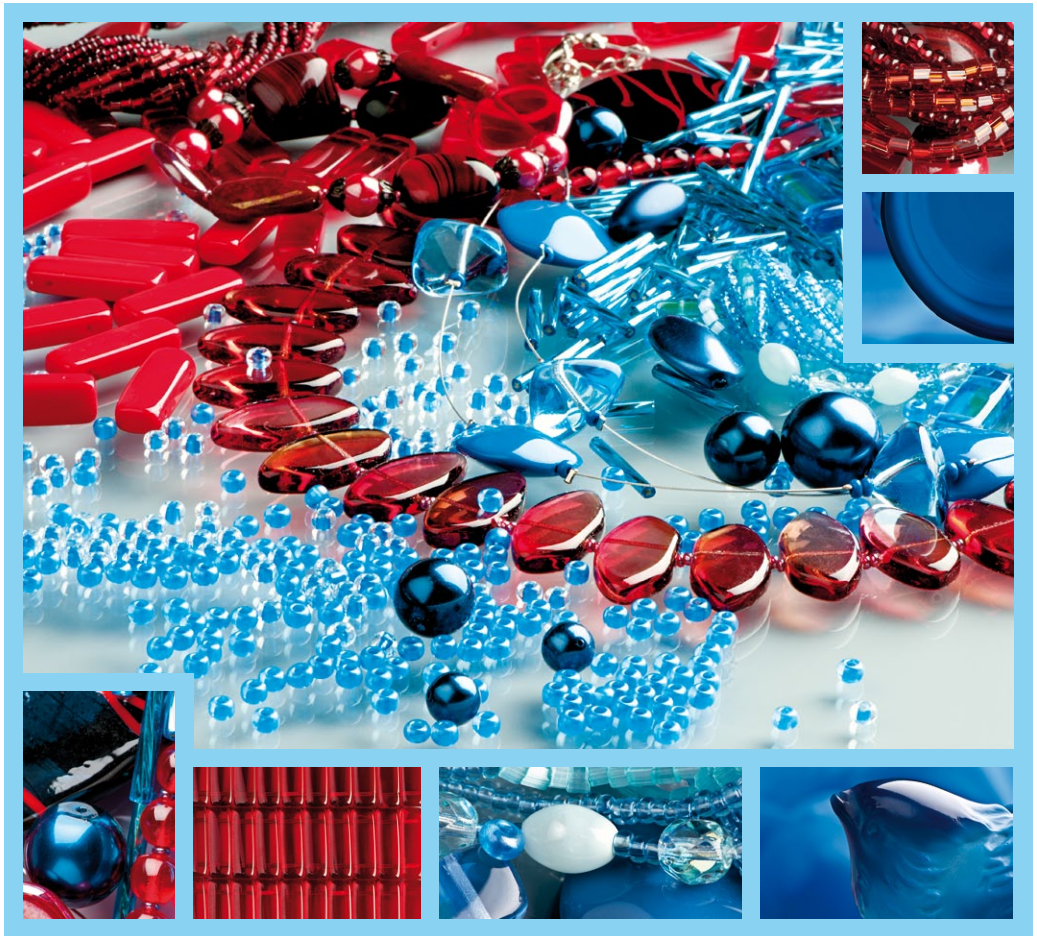

**THE CONVINCINGLY ATTRACTIVE PASTEL COLORS** of the opal and silk glass soften the hardness of the emerald. The coolness of the light and rich green shades and the steel grey will suit warm natural materials. The harmony of the flawless shapes and the surface finishes stands for success.

### Colors:

Emerald, chrysolite, hematite, lignite grey, purple-grey, steel grey, pearly grey, opal and rosaline

## *Excellent experience*

**SUN, WATER AND AIR COMPEL THE HUMAN IMAGINATION** to perform unbelievable feats. The transparent combined glass hides unsuspected possibilities. The infinite graceful curves of the colour cores imprisoned in the glass crust of the seed bead's shape dance indefatigably. However, the silken overlays only unveil their secrets carefully. The play of colours is without end, so there must be a resounding command which sets out clear rules.

### **Colors:**

Light siam, montana, capri blue, dark cobalt, plumb blue, green jasper, freezing nephrite, dark slate, Mediterranean blue.

## *Honey treasure*

**THE OLD-WORLD, NATURALLY CONCEIVED COMBINATION** of copper, bronze and gold shades works harmoniously with the glass accessories in the colours of yellow opal, mahogany and other fire motifs. The metallic appearance of the spray coating and the lusters is inspiring on the smooth shapes and engravings on the metal parts and the seed beads.

### **Colors:**

Gold, bronze brown, honey, light yellow, dark mahogany, brown amber, coral pink and fire orange
