

The Environmental Policy (ISO 14001)

We use an environmental management system based on the ISO 14001 standard. The goal is to protect the environment both within our company and its environs and at our clients' premises. We have adopted an environmental policy with the motto:

Environmental protection – a green company

We ensure compliance with this motto by concentrating on the following principles:

1) A responsible relationship with the environment

- a) We only introduce technology into our production which has the smallest possible impact on the environment. We evaluate the impacts of any new technologies before deciding to implement them.
- b) We only launch products onto the market or send them for further processing, if they are environmentally friendly during their storage, use and disposal.
- c) We are permanently looking for ways of reducing the consumption of energy and raw input materials. We control the amounts of hazardous substances which we use and we concern ourselves with the amount and types of waste.
- d) We apply thorough risk and pollution prevention in order to prevent the occurrence of any exceptional circumstances, the effects of which could have a negative environmental impact.

2) The communication of environmental matters

- a) We share our environmental policy with all our employees and we submit it to any other involved parties in a suitable form. We guide and educate our employees to behave responsibly towards the environment with the goal of ensuring that they fully understand, support and apply our environmental policy.
- b) We require our contractual partners to respect our environmental policy. We also presuppose and expect that our suppliers are bound by the same or similar rules.

Ing. Miroslav Šebesta
the Managing Director
