

Step 6:
Prepare the blue stringing (fig. no. 6a) and this time thread it through the red ends (fig. no. 6b + 6c). Once this has been done, use the skewer to straighten out the stringing (fig. no. 6d).

Step 7:
Keep adding stringings in that order (white, red, blue) until the necklace is of a sufficient length. Attach the rings to the last piece using pliers and it is finished (fig. no. 7).

NECKLACE MADE FROM SEED BEADS WITH A WHITE LINING

Tricolor

PRECIOSA

Tricolor

We present a simple tutorial for the original and effective Tricolor necklace. We have used the transparent seed beads with a white lining from the PRECIOSA White Lining collection. The white lining highlights the color of the transparent glass of the seed beads so that your finished designs sparkle with a variety of colors. Our necklace variant is in the red-white-blue color combination, but you can use the colors of your choice. We offer PRECIOSA White Lining seed beads in 26 colors.

A 0.20 mm line; a sewing needle; scissors;
pliers

A carabiner and 7x 1 cm rings

Difficulty: ●●●●●

Technique: stringing

Procedure:

The number of prepared stringings depends on how long you want the necklace to be. One stringing is about 60 cm long. You can use a variety of colors. We have used 5 stringings from each rocaille color.

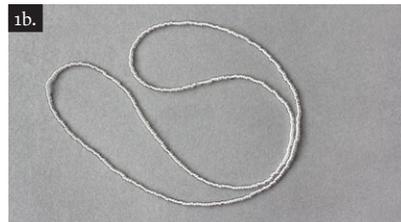

Step 1:

First string the white rocailles. Once you have strung ca 60 cm, tie off the ends and sew them into the nearest seed beads (fig. no. 1a + 1b). Coil up the stringing 3x and the first piece is finished (fig. no. 1c).

1c.

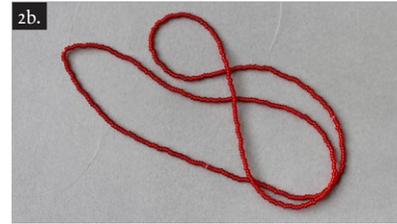

Step 2:

Then do the same with the red rocailles (fig. nos. 2a + 2b + 2c).

2a.

2b.

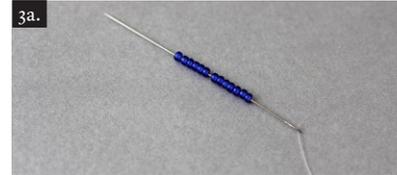

2c.

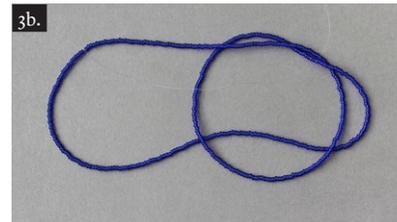

Step 3:

And you will also need a blue stringing (fig. nos. 3a + 3b + 3c). You have now finished a stringing in each color (fig. no. 3d).

3c.

3d.

Step 4:

Prepare the white stringing and the carabiner with one ring. Put the ring on the carabiner and cinch the stringing in the middle (fig. no. 4).

4.

Step 5:

You can use a wooden skewer to assist you (fig. no. 5a). Prepare the red stringing (fig. no. 5b) and thread it through the white stringing (fig. nos. 5c + 5d). You can then use the skewer to straighten out the stringings (fig. no. 5e).
